*Fall Management*  
Best Practice Guideline

**Disclaimer:** This Best Practice Guideline is presented as a model only by way of illustration. It has not been reviewed by counsel. Before applying a particular form to a specific use by your organization, it should be reviewed by counsel knowledgeable concerning applicable federal and state health care laws and rules and regulations. This Best Practice Guideline should not be used or relied upon in any way without consultation with and supervision by qualified physicians and other healthcare professionals who have full knowledge of each particular resident’s case history and medical condition.

This Best Practice Guidelines is offered to nursing facilities, assisted living communities, residential health care facilities, adult day health services providers and other professionals for informational and educational purposes only.

The Health Care Association of New Jersey (HCANJ), its executers, administrators, successors, and members hereby disclaim any and all liability for damage of whatever kind resulting from the use, negligent or otherwise, of all Best Practice Guidelines herein.

This Best Practice Guideline was developed by the HCANJ Best Practice Committee (“Committee”), a group of volunteer professionals actively working in or on behalf of health care facilities in New Jersey, including skilled nursing facilities, sub-acute care and assisted living providers.

The Committee’s development process included a review of government regulations, literature review, expert opinions, and consensus. The Committee strives to develop guidelines that are consistent with these principles:

- Relative simplicity
- Ease of implementation
- Evidence-based criteria
- Inclusion of suggested, appropriate forms
- Application to various long term care settings
- Consistent with statutory and regulatory requirements
- Utilization of MDS (RAI) terminology, definitions and data collection

Appropriate staff (Management, Medical Director, Physicians, Nurse-Managers, Pharmacists, Pharmacy Consultants, Interdisciplinary Care Team) at each facility/program should develop specific policies, procedures and protocols to best assure the efficient, implementation of the Best Practice Guideline’s principles.

The Best Practice Guidelines usually assume that recovery/rehabilitation is the treatment or care plan goal. Sometimes, other goals may be appropriate. For example, for patients receiving palliative care, promotion of comfort (pain control) and dignity may take precedence over other guideline objectives. Guidelines may need modification to best address each facility, patient and family’s expectations and preferences.

Recognizing the importance of implementation of appropriate guidelines, the Committee plans to offer education and training. The HCANJ Best Practice Guidelines will be made available at www.hcanj.org.

HCANJ Best Practice Committee

Fall Management Guidelines

MISSION STATEMENT
The Falls Management Program is designed to assist personnel to reduce falls, minimize injury and ultimately improve the quality of life of our residents.

This Best Practice Guideline should not be used or relied upon in any way without consultation with and supervision by qualified physicians and other healthcare professionals who have full knowledge of each particular resident’s case history and medical condition.

This Best Practice Guidelines is offered to nursing facilities, assisted living communities, residential health care facilities, adult day health services providers and other professionals for informational and educational purposes only.

DEFINITION
A fall is defined as an occurrence characterized by the failure to maintain an appropriate lying, sitting or standing position, resulting in an individual's abrupt, undesired relocation to the ground. The definition of a fall extends to and includes following factors:
- An episode in which a resident has lost his/her balance and would have fallen were it not for staff intervention.
- The presence or absence of a resultant injury; a fall without injury is a fall.
- The distance to the next lower surface (in this case, the floor) does not determine the incidence of a fall. (i.e. bed or mattress close to the floor)

OBJECTIVES
- Limit and/or prevent the occurrence of falls within the parameters that can be controlled through structured program interventions.
- Minimize the severity of injuries sustained by an elderly individual resulting from a fall.
- Provide the professional staff with standards of practice that will enable them to perform and teach effectively.
- Educate the resident, family and direct care and ancillary staff.
- Limit the liability and financial risk to the facility.

PROGRAM OUTLINE
Each health care system is encouraged to use this comprehensive guideline to outline and further define its’ program specific, fall management policy and procedures.

I. KEY ELEMENTS TO A FALL MANAGEMENT PROGRAM
   A. Facility leadership approval and participation
   B. Assessments
   C. Dynamic treatment plan
      1. Role of Interdisciplinary Team or Resident Review Team
      2. Use of non-pharmaceutical interventions
D. Appropriate and necessary use of devices (enablers, restraints)
E. Re-assessments, implementation and evaluation of treatment plan
F. Education/awareness

II. DETAILED ELEMENTS
A. Assessments
   1. Clinical Assessment
      a) assessment form - recommend rating scale
      b) completed by Registered Nurse
         (1) time of completion
         (2) admission fall risk assessment completed within 24 to 48 hours of admission
         (3) if indicated, comprehensive fall risk assessment within 14 to 21 days after admission
      c) frequency of reassessment:
         (1) upon a fall
         (2) significant change likely to increase fall prediction factors
         (3) quarterly for skilled nursing and sub-acute care facilities
         (4) semi-annually for assisted living communities
   2. Rehabilitation Assessment
      a) completed by PT or OT
      b) form: (e.g. Tinetti Gait and Balance Tool or Berg Balance Scale)
      c) transfer evaluation
      d) evaluate for vestibular imbalance
      e) time of completion (recommend 24 to 48 hours after referral)
      f) frequency of re-evaluation (see assessments)
   3. Continence Protocol As Indicated
      a) toilet schedule
      b) bladder training as indicated
   4. Mental Status Assessment
      a) complete mini-mental status assessment
      b) recall
      c) judgment (safety awareness)
   5. Pain Assessment (see Best Practice Guidelines and Opioid Guidance)
      a) opioid use
      b) chronic unrelieved pain
      c) acute exacerbation of usually controlled pain
      d) new pain
6. Review record of diagnoses which contribute to increased falls risk, such as
   a) Orthostatic Hypotension
   b) Osteopenia
   c) Osteoporosis
   d) History of falls
   e) Dementia
   f) Delirium
   g) Sensory Impairment (hearing, touch, sight)
   h) Parkinsons
   i) Atrial fibrillation
   j) Seizure disorders
   k) Arthritis
   l) Vertigo
   m) CVA
   n) Loss of Limb(s)
   o) Fractures
   p) Anemia
   q) Wandering
   r) Anger

7. Pharmacological Assessment and Review
   a) completed by pharmacy consultant or physician
   b) review of medication profile
   c) new or changed medications
   d) use of off label antipsychotics
   e) use of benzodiazepines
   f) inappropriate medications for the elderly Review Beers Criteria
   g) adverse or idiosyncratic medication reactions or interactions

8. Environment Assessment
   a) physical room layout
   b) equipment and assistive devices
   c) lighting
   d) other

9. Analysis/Assess Level of Risk Assessment
   a) identify level of risk based on collective assessments and professional judgment.

B. Dynamic Treatment Plan
   1. Specific interventions based on results of fall assessment, and client preferences.
      The interdisciplinary/resident review team members must address:
a) resident, staff and family teaching  
b) room modifications  
c) resident's daily routines  
d) mental status/behaviors  
e) physical limitations  
   (1) ADL skills  
   (2) continence  
f) pain  
g) medication use  
h) non-pharmaceutical interventions in place  
i) consistent appropriate and proper uses of assistive or protective devices, electric scooters, etc., based on assessments  

2. Updated information communicated to the staff, resident and family  
a) Staff  
   (1) general classification system identifying resident's potential to fall  
   (2) summary of assessments/changes in service or care plan  
   (3) verbal and written reports  
b) residents: one to one education and review  
c) families: care/status review conferences, attendance/participation  

C. Evaluation  
1. Post fall evaluation  
a) Fall Management Investigation or Post Fall Assessment Tool  
   (1) physical assessment  
   (2) contributing factors to fall  
   (3) medication changes (new or discontinued)  
   (4) mental status changes  
   (5) new diagnoses  

2. Reporting mechanism/tracking of falls within the facility  
a) a facility “Facility Fall Summary/Analysis”  
b) action of the interdisciplinary team  
   (1) timely modifications to the treatment plan  
   (2) family/resident conferences  
   (3) physical adaptations to room, wheelchair and/or walking devices  
c) collective review, identification and analysis of trends in resident falls throughout the facility (see E. Quality Improvement, Pg. 9)
3. Facility protocol may include falls management review and analysis by the safety committee, falls committee, IDC plan committee, quality improvement committee or other established interdisciplinary group.

D. Education/Awareness

1. Falls Program In-service
   a) Staff members
      (1) Intervals for review of Fall Management Program:
          (a) upon orientation
          (b) semiannual
          (c) post fall evaluation as necessary
      (2) Contents of review:
          (a) policies and procedures
          (b) documentation standards

   b) Resident
      (1) Intervals for review of Fall/Safety Information:
          (a) admission
          (b) care plan meetings
          (c) quarterly resident population education on fall management
          (d) after a fall
      (2) Contents of review:
          (a) instructions and information concerning safety awareness
          (b) proper use of call bells, walking devices, wheelchairs and other assistive devices

   c) Family
      (1) Intervals for review of Fall/Safety Information:
          (a) upon admission of the resident
          (b) address with family as resident presents need to discuss
          (c) upon discharge of resident
      (2) Contents of review:
          (a) reasonable expectations from the facility
          (b) how they can assist

d) Department of Health and Senior Services
   (1) Inform the department of health personnel about the facility's Fall Program and what is the level of implementation
E. Quality Improvement

1. Collect falls data (including near miss data)
   a. Post fall tool
   b. Falls summary report
      (1) conduct interdisciplinary analysis of information to gain helpful knowledge
      (2) review and revise policies and procedures as appropriate
         (a) retrain staff on new policies and procedures

2. Complete Facility Falls Data summary document
   a. Analyze information
   b. Revise policies and procedures as appropriate
      (1) retrain staff on new policies and procedures
BEST PRACTICE PROGRAM

BEST PRACTICE TOOLS:

ASSESSMENT, PLAN OF CARE

AND INVESTIGATION FORMS

- Fall Risk Predictive Factors Assessment
- Falls Management: Optional Initial Plan of Care
- Falls Management Investigation—Post Fall Tool
- Falls Management Post Fall Assessment Tool
## FALL RISK PREDICTIVE FACTORS ASSESSMENT

**INSTRUCTIONS:** Assess the resident status in the eight clinical condition parameters listed below (A-H) by assigning the corresponding score which best describes the resident in the appropriate assessment column. Add the column of numbers to obtain the Total Score. If the total score is 10 or greater, the resident may be considered at HIGH RISK for potential falls. If indicated, initiate a plan of care to reduce the likelihood of a fall and/or severity of fall related injury. (See other side for optional plan of care)

**RESIDENT**

Last_____, First____, Room #: ______

Rev. 03/2007  Side 1 of 2 Falls Management-Risk Assessment and Optional Initial Plan of Care
# FALLS MANAGEMENT: OPTIONAL INITIAL PLAN OF CARE

**NOTE:** Interventions includes general standards of care that should be considered, facility/program/unit specific protocols and environmental safety features. The medical record documents - physician's orders, progress notes, therapy notes, nurses notes, and consultation reports may include additional interventions that are intended to manage underlying conditions and circumstances that are predictive of falls. The below, resident-specific interventions are a guide. Actual care and services may vary in accordance with specific circumstances.

**DIRECTIONS:** COMPLETE ALL INTERVENTION CATEGORIES THAT APPLY.

## GOALS (on-going, may not be date specific)

1. to reduce incidence of falls and severity of fall related injury.

2. 

3. 

## SELECTED INTERVENTIONS

### A LEVEL OF CONSCIOUSNESS / MENTAL STATUS

- Behavioral management / modification: 

- Movement sensor alarm: 
  - Bed alarm
  - Chair alarm
  - Other
  - Alarm test and battery check per protocol

- Least restrictive restraint: 
  - Bed
  - Chair
  - Other

- Assistive devices: 
  - Wheelchair
  - Walker
  - Other
  - Other

- Increase assistance and surveillance: 
  - DoloRPC near station / staff when out of bed
  - Toilet per B & B assessment
  - Other

- Proactively promote comfort: 
  - Pain medication
  - Other

- Review Medications: 
  - Yes, date __/__/__
  - No

- Medical Consultation: 
  - Yes, date __/__/__
  - No

- Psychiatric Consultation: 
  - Yes, date __/__/__
  - No

### B AMBULATORY ELIMINATION STATUS

- PT/OT assessment and treatment

- Restorative nursing (exercise / ambulation)

- Increase help with ADLs (activities of daily living)

- Assistive devices: 
  - Canes
  - Cane
  - Crutches
  - Walker
  - Other
  - Other

- Protective devices: 
  - Hip protector
  - Head/shoulder protector
  - In bed protector
  - Out of bed protector
  - Other

- Transfer: 
  - No assistance
  - One person
  - Two person
  - Other
  - Other device
  - Other

### C GAIT / BALANCE

- 

### D VISION AND HEARING STATUS

- Vision intervention: 
  - DoroPCed eyewear
  - Eye wear within arm's reach
  - Encourage resident to wear glasses
  - Modify lighting
  - Modify contrast colors
  - Other

### E ORTHOSTATIC BLOOD PRESSURE (SYSTOLIC)

- Low blood pressure: 
  - Instruct to change position slowly
  - Instruct to sit on edge of bed and dangle feet before standing
  - Instruct to use dorsiflexion (flexion of the foot in an upward direction) before standing
  - Instruct not to tilt head backwards

- If medication change: 
  - Monitor blood pressure while lying to sitting, sitting to standing. Inform physician.
  - Other interventions: 
    - TED hose (thromboembolic disease support hose)
    - Promote adequate hydration
    - Other

### F FALLS HISTORY (PAST 3 MONTHS)

- Monitor and report changes in behavior: (anxiety, sleep, changes in behavior, mood, etc.)

- Monitor and report drug side effects (See Mental Status)

- Monitor routines: 
  - No caffeine after 4 pm
  - Use at night or with supervision
  - Comfort measures: good hygiene
  - Pain management
  - Regular exercise routine
  - Bathe/relaxing bed routine
  - Individualized toileting at night
  - Other:

Last _______ First _______ Middle Int. ________ Chart # ________

Rev. 03/2007
FALLS MANAGEMENT INVESTIGATION — POST FALL TOOL

Resident Name__________________________________________ Age_______ Living Quarters Room #_________

Date of fall _____/_____/____   Day of week_________________ Time________________ AM or PM

1. Was this fall observed? ☐No ☐Yes If yes, by whom: ________________________________

2. Location of fall (be as exact as possible) ___________________________________________

3. Was the Resident alone at the time of the fall? ☐Yes ☐No

4. What was the reason for the Resident to be in that location? ______________________________________

5. Including this fall, what are the number of falls past 3 months? ☐None ☐One ☐Two ☐Three ☐Other:____

6. Were protective or safety devises in use at the time of the fall? ☐No

   ☐Yes ☐If yes, give detail: __________________________________________________________

7. Investigate the surroundings where the incident occurred for any evidence of the following:

<table>
<thead>
<tr>
<th>Clue</th>
<th>☑ Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Water spills?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Clutter on the floor?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Phone cords/TV cords lying about?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Poor lighting?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Improper bed height?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Other furniture involved?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Wheelchair unlocked?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Wheelchair foot-rests in the way?</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

8. Has the Residents health care status changed? Answer the following questions: ☑

   1. Do the “clues” reflect any environmental factors that could be involved in this fall?
   2. Do the “clues” reflect any health care factors that could be involved in this fall?

<table>
<thead>
<tr>
<th>Clue</th>
<th>☑ Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>New/increase/decrease in medications?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Weakness/fatigue?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Dizziness?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Changes in blood pressure?</td>
<td></td>
<td></td>

<tr>
<td>Recent return from hospital?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Recent weight loss?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Pain?</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. If the resident has had more than one fall, are there any similarities? (time, place, resident activity)
4. How do the “clues” that you have found, relate to each other?
5. Previous falls: a) How many have there been in the past 3 months? b) Where did they occur? c) What time did they occur? d) What actions were set in place after the previous fall(s)?
6. Is there a need to re-educate the patient, family and/or staff?
7. Has the patient’s/resident’s Care Plan been updated?

                         2.________________________________________________________________________
                         (name and title of individual)

1. Was this fall observed? □No  □Yes  If yes, by whom:
   1.________________________________________________________________________
      (name and title of individual)
   2.________________________________________________________________________
      (name and title of individual)

2. Was the resident identified as “High Risk” prior to the fall? □No  □Yes

3. Resident vital signs:

   Usual vital signs prior to the fall:
   B/P Lying:                           Pulse:
   B/P Sitting:                        Pulse:
   B/P Standing:                      Pulse:

   Vital signs at time of the fall:
   B/P Lying:                           Pulse:
   B/P Sitting:                        Pulse:
   B/P Standing:                      Pulse:

   Vital signs—minutes after the fall:
   B/P Lying:                           Pulse:
   B/P Sitting:                        Pulse:
   B/P Standing:                      Pulse:

4. Does the resident have a history of falls? □No  □Yes  If yes, list dates of all previous falls for the past 12 months:
   • Date of fall____/_____/_______ Time______________ AM or PM
   • Date of fall____/_____/_______ Time______________ AM or PM
   • Date of fall____/_____/_______ Time______________ AM or PM

5. List the life safety measures in place prior to this current fall: ____________________________________________________

6. Ask the following questions of the resident “immediately” after their fall:  “ Why do you think you fell? ”
   Resident Response: ________________________________________________________________

7. Ask the following questions of the resident immediately after their fall:  ✓

   | Yes | No |
   ---|---|---|
   Were you hungry? |  | Did you need to use the bathroom?
   Were you in pain? |  | Other:
   Were you bored?  |  |

8. What footwear did the resident have on: ✓
   Barefoot  Slippers
   Shoes    Other:

Confidential Document Continuous Quality Improvement (CQI)

TINETTI ASSESSMENT TOOLS

- Description
- Balance
- Gait
TINETTI ASSESSMENT TOOL: Description

POPULATION: Adult population, elderly patients

DESCRIPTION: The Tinetti Assessment Tool is a simple, easily administered test that measures a patient’s gait and balance. The test is scored on the patient’s ability to perform specific tasks.

MODE OF ADMINISTRATION: The Tinetti Assessment Tool is a task performance exam.

TIME TO COMPLETE: 10 to 15 minutes

TIME TO SCORE: Time to score is included in time to complete

SCORING: Scoring of the Tinetti Assessment Tool is done on a three point ordinal scale with a range of 0 to 2. A score of 0 represents the most impairment, while a 2 would represent independence of the patient. The individual scores are then combined to form three measures; an overall gait assessment score, an overall balance assessment score, and a gait and balance score.

INTERPRETATION: The maximum score for the gait component is 12 points. The maximum score for the balance component is 16 points. The maximum total score is 28 points. In general, patients who score below 19 are at a high risk for falls. Patients who score in the range of 19-24 indicate that the patient has a risk for falls.

RELIABILITY: Interrater reliability was measured in a study of 15 patients by having a physician and a nurse test the patients at the same time. Agreement was found on over 85% of the items and the items that differed never did so by more than 10%. These results indicate that the Tinetti Assessment Tool has good interrater reliability.

VALIDITY: Not reported

## TINETTI ASSESSMENT TOOL: BALANCE

BERG BALANCE MEASURE

- Description
- Balance Scale
BERG BALANCE MEASURE: Description

POPULATION………………………Elderly patients, balance

DESCRIPTION……………………..The Berg Balance Measure was designed to test elderly patients level of balance. The test consists of 14 balance items which have been deemed safe for elderly patients to perform.

MODE OF ADMINISTRATION……..The Berg Balance Measure is a task performance exam.

COMPLETION —

TIME TO COMPLETE………………15 to 20 minutes

TIME TO SCORE…………………The test is scored while it is administered.

SCORING…………………………The independent items are scored on a five point ordinal scale; where 0 indicates the patients inability to perform the task and 4 represents independence. The individual points are then summed to achieve a total score.

INTERPRETATION………………The higher the patient scores on the balance measure the more independent the patient is.
BERG BALANCE MEASURE: BALANCE SCALE

Patient/Resident Name: _________________________________________ Date: _________________
Location: ____________________________________ Rater: _________________________________

General Instructions:
Please demonstrate each task and/or give instructions as written. When scoring, please record the lowest response category that applies for each item.

In most items, the subject is asked to maintain a given position for specific time. Progressively more points are deducted if the time or distance requirements are not met, if the subject's performance warrants supervision, or if the subject touches an external support or receives assistance from the examiner. Subjects should understand that they must maintain their balance while attempting the tasks. The choices of which leg to stand on or how far to reach are left to the subject. Poor judgment will adversely influence the performance and the scoring.

Equipment required for testing are a stopwatch or watch with a second hand, and a ruler or other indicator of 2, 5 and 10 inches (5, 12.5 and 25 cm). Chairs used during testing should be of reasonable height. Either a step or a stool (of average step height) may be used for item #12.

TOTAL

( Page. 1 of 4 )
Circle appropriate numbers.

1. SITTING TO STANDING
   Instructions: Please stand up. Try not to use your hands for support.
   4 able to stand without using hands and stabilize independently
   3 able to stand independently using hands
   2 able to stand using hands after several tries
   1 needs minimal aid to stand or to stabilize
   0 needs moderate or maximal assist to stand

2. STANDING UNSUPPORTED
   Instructions: Please stand for two minutes without holding.
   4 able to stand safely 2 minutes
   3 able to stand 2 minutes with supervision
   2 able to stand 30 seconds unsupported
   1 needs several tries to stand 30 seconds unsupported
   0 unable to stand 30 seconds unassisted

   Note: If a subject is able to stand 2 minutes unsupported, score full points for sitting unsupported. Proceed to item #4.

3. SITTING WITH BACK UNSUPPORTED BUT FEET SUPPORTED ON FLOOR OR ON A STOOL
   Instructions: Please sit with arms folded for 2 minutes.
   4 able to sit safely and securely 2 minutes
   3 able to sit 2 minutes under supervision
   2 able to sit 30 seconds
   1 able to sit 10 seconds
   0 unable to sit without support 10 seconds

4. STANDING TO SITTING
   Instructions: Please sit down.
   4 sits safely with minimal use of hands
   3 controls descent by using hands
   2 uses back of legs against chair to control descent
   1 sits independently but has uncontrolled descent
   0 needs assistance to sit

5. TRANSFERS
   Instructions: Arrange chair(s) for a pivot transfer. Ask subject to transfer one way toward a seat with armrests and one way toward a seat without armrests. You may use two chairs (one with and one without armrests) or a bed and a chair.
   4 able to transfer safely with minor use of hands
   3 able to transfer safely definite need of hands
   2 able to transfer with verbal cueing and/or supervision
   1 needs one person to assist
   0 needs two people to assist or supervise to be safe

BERG BALANCE MEASURE: BALANCE SCALE

Patient’s Name: ___________________________ Date: ___________________________
Location: ___________________________ Rater: ___________________________
6. STANDING UNSUPPORTED WITH EYES CLOSED
   Instructions: Please close your eyes and stand still for 10 seconds.
   4  able to stand 10 seconds safely
   3  able to stand 10 seconds with supervision
   2  able to stand 3 seconds
   1  unable to keep eyes closed 3 seconds but stays steady
   0  needs help to keep from falling

7. STANDING UNSUPPORTED WITH FEET TOGETHER
   Instructions: Place your feet together and stand without holding.
   4  able to place feet together independently and stand 1 minute safely
   3  able to place feet together independently and stand for 1 minute with supervision
   2  able to place feet together independently and to hold for 30 seconds
   1  needs help to attain position but able to stand 15 seconds feet together
   0  needs help to attain position and unable to hold for 15 seconds

8. REACHING FORWARD WITH OUTSTRETCHED ARM WHILE STANDING
   Instructions: Lift arm to 90 degrees. Stretch out your fingers and reach forward as far as you can.
   ( Examiner places a ruler at end of fingertips when arm is at 90 degrees. Fingers should not touch
   the ruler while reaching forward. The recorded measure is the distance forward that the finger
   reach while the subject is in the most forward lean position. When possible, ask subject to use
   both arms when reaching to avoid rotation of the trunk.)
   4  can reach forward confidently >25 cm (10 inches)
   3  can reach forward >12.5 cm safely (5 inches)
   2  can reach forward >5 cm safely (2 inches)
   1  reaches forward but needs supervision
   0  loses balance while trying/ requires external support

9. PICK UP OBJECT FROM THE FLOOR FROM A STANDING POSITION
   Instructions: Pick up the shoe/slipper which is placed in front of your feet.
   4  able to pick up slipper safely and easily
   3  able to pick up slipper but needs supervision
   2  unable to pick up but reaches 2-5cm (1-2 inches) from slipper and
      keeps balance independently
   1  unable to pick up and needs supervision while trying
   0  unable to try/needs assist to keep from losing balance or falling

10. TURNING TO LOOK BEHIND OVER LEFT & RIGHT SHOULDERS WHILE STANDING
    Instructions: Turn to look directly behind you over toward left shoulder. Repeat to the right.
    Examiner may pick an object to look at directly behind the subject to encourage a better twist turn.
    4  looks behind from both sides and weight shifts well
    3  looks behind one side only other side shows less weight shift
    2  turns sideways only but maintains balance
    1  needs supervision when turning
    0  needs assist to keep from losing balance or falling

BERG BALANCE MEASURE:  BALANCE SCALE  (Page 3 of 4)

Patient/Resident Name: ___________________________ Date: _________________
Location: ___________________________ Rater: ___________________________
11. **TURN 360 DEGREES**  
*Instructions:* Turn completely around in a full circle. Pause. Then turn a full circle in the other direction.  
- 4: able to turn 360 degrees safely in 4 seconds or less  
- 3: able to turn 360 degrees safely one side only in 4 seconds or less  
- 2: able to turn 360 degrees safely but slowly  
- 1: needs close supervision or verbal cueing  
- 0: needs assistance while turning

12. **PLACING ALTERNATE FOOT ON STEP OR STOOL WHILE STANDING UNSUPPORTED**  
*Instructions:* Place each foot alternately on the step/stool. Continue until each foot has touched the step/stool four times.  
- 4: able to stand independently/safely & complete 8 steps in 20 seconds  
- 3: able to stand independently and complete 8 steps >20 seconds  
- 2: able to complete 4 steps without aid with supervision  
- 1: able to complete >2 steps needs minimal assist  
- 0: needs assistance to keep from falling/unable to try

13. **STANDING UNSUPPORTED ONE FOOT IN FRONT**  
*Instructions:* (Demonstrate to subject) Place one foot directly in front of the other. If you feel that you cannot place your foot directly in front, try to step far enough ahead that the heel of your forward foot is ahead of the toes of the other foot. (To score 3 points, the length of the step should exceed the length of the other foot and the width of the stance should approximate the subject's normal stride width)  
- 4: able to place foot tandem independently and hold 30 seconds  
- 3: able to place foot ahead of other independently and hold 30 seconds  
- 2: able to take small step independently and hold 30 seconds  
- 1: needs help to step but can hold 15 seconds  
- 0: loses balance while stepping or standing

14. **STANDING ON ONE LEG**  
*Instructions:* Stand on one leg as long as you can without holding.  
- 4: able to lift leg independently and hold >10 seconds  
- 3: able to lift leg independently and hold 5-10 seconds  
- 2: able to lift leg independently and hold = or >3 seconds  
- 1: tries to lift leg unable to hold 3 seconds but remains standing independently  
- 0: unable to try or needs assist to prevent fall

--- Facility Falls Data Summary ---
CONFIDENTIAL DOCUMENT FOR QUALITY IMPROVEMENT ANALYSIS ONLY.
Data is not risk adjusted and should not be used to compare among facilities.

<table>
<thead>
<tr>
<th>Facility __________________________________________</th>
<th>Month Ending ____________________________</th>
</tr>
</thead>
</table>

1. Total # of falls ................................................................. ________
2. Total # of falls with injury ............................................... ________
3. Total # of residents who fell ........................................... ________
4. Total # of residents with 2 or more falls ..................... ________

5. Total # of falls per resident computed only for residents who fell:
   _____ divided by _____ = ...................................................... ________
   (Example: (total # of falls from #1 above) 14 Falls divided by (total # of residents who 
   fell from #3 above) 10 residents = 1.4 Falls per residents who fell.)

6. For the month, total resident days:
   _____ x _____ = ________
   Average daily census multiplied by total days in the month = resident days.
   (Example: Average Daily Census 100 x 30 days = 3,000 Resident Days.)

7. Falls per 1,000 resident days:
   _____ x 1,000 = ________ divided by _____ = ________
   Total number of resident falls in one month from #1 above times 1,000, divided by 
   total resident days from #6 above.
   (Example: 14 falls x 1,000 = 14,000 divided by 3,000 (total resident days) = 
   4.66 falls per 1,000 Resident Days.)

8. Falls With Injury per 1,000 resident days:
   _____ x 1,000 = ________ divided by _____ = ________
   Total number of resident falls with injuries in one month from #2 above times 1,000, 
   divided by total resident days from #6 above.
   (Example: 2 falls with injury x 1,000 = 2,000 divided by 3,000 (total resident days) 
   = 0.66 falls with injury per 1,000 Resident Days.)

**Note:** For the purposes of this report “injury” means: any fracture, any sutures, any need for hospitalization or other immediate medical attention, and any changes in functional ability requiring a change in Care Plan. *Injury does not include minor skin tears or bruises.*
