Case Study

“Sunny Vista” has a strong reputation for complex orthopedic rehabilitation and referring hospitals seek them out as a **preferred provider** for their referral network.

The publication of new QMs have called Sunny Vista’s performance into question by consumers, hospitals and orthopedic surgeons in their area. Dismayed by this, the administrator (Kate) organizes an interdisciplinary team to better understand their data, and create an improvement plan.

Patient Driven Payment Model (PDPM)

How did we land on PDPM

- The Contractors: Acumen
- RCS-1
- Tsunami of responses

Three Goals of Payment Reform

Three goals identified

- more accurately compensate SNFs;
- reduce incentives for SNFs to deliver therapy based on financial considerations, rather than resident need;
- maintain simplicity

Three goals remain

The cheese has moved ... will Sniff find it?

Steven Littlehale

Follow @PointRight

Steven Littlehale

In 1988 Spencer Johnson, M.D., published an allegorical tale (or was it tall?) about how four characters respond to change. One of the characters (a mouse) was called Sniff. Well, Sniff, start sniffing!

Currently, Medicare pays for services provided by skilled nursing facilities (SNFs) under the Medicare Part A SNF PPS benefit on a per diem using the RUG-IV grouper.

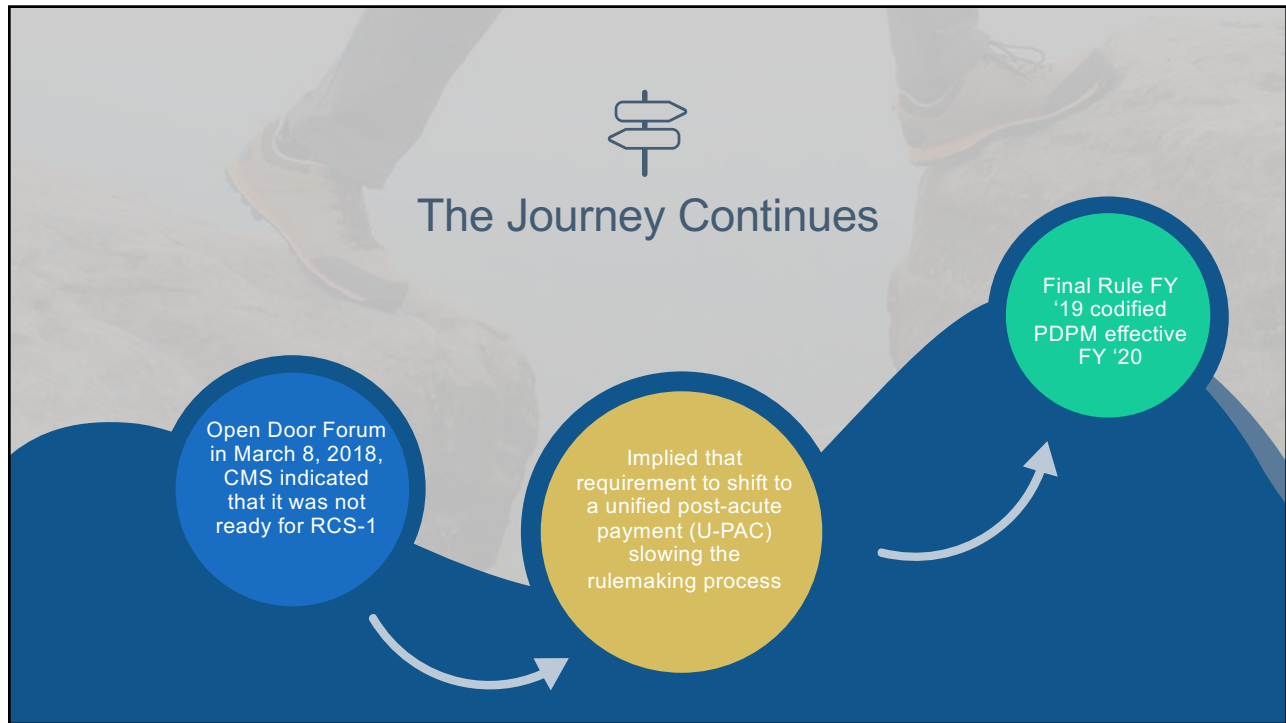

The most significant driver of this reimbursement model is the amount of therapy (days and minutes) provided to a Medicare patient, regardless of their specific needs or outcomes achieved. Through the years, many impressive governmental and independent advisory groups – whose acronyms rival a can of alphabet soup – have voiced concerns about inappropriate incentives in the current reimbursement system.

Caregivers also shared some of these same concerns. Therapists have also complained about a system that “de-incentivizes” an individualized approach to therapy treatment. Nurses felt their patients’ care was usurped by a system that didn’t look at their overarching needs.

Enter RCS-1.

CMS contracted with Acumen LLC to study and present alternatives to the existing payment structure. Its [technical report](#) coupled with CMS’s [Advance Notice of Proposed Rulemaking](#) make for fascinating reading. (CMS welcomes comments on this proposed RUG-IV replacement until Friday.)

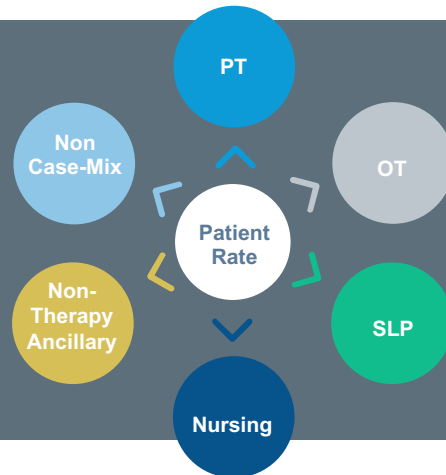

PDPM – From Volume to Value(ish)

- Payment is based upon verifiable patient characteristics and diagnoses, not the amount of therapy delivered
- More consideration of ancillary costs
- Fewer assessments required to establish rates
- Reimbursement adjusts automatically (downward) over time
- More Case Mix components included in determining payment

The Case-Mix Components

Cut into some apple pie instead of your MDS staffing budget

Steven Littlehale

Follow @PointRight

Steven Littlehale

It was about an hour after the release of the Center for Medicare & Medicaid Services' proposed rule for FY19, which contained the big Patient-Driven Payment Model reveal, that a wave of bold and somewhat uninformed statements surfaced.

It was equal only to the saturation of “PDPM experts” who have seized upon this opportunity. The volume of misinformation is notable. Is this our own version of “fake” news?

Here are some of my favorites:

- “The MDS is irrelevant in PDPM.” (Excuse me? I think I count only one non-MDS field.);
- “We have to make way for, and prepare for the ‘new resident’ coming in our buildings.” (... because up until PDPM they have been hiding precisely where?); and
- “I’m going to cut my MDS staff.” (Ouch!)

It’s the last I want to discuss.

Others and I have tackled many of these myths in various McKnight’s blogs, but I’ve yet to see a compelling analysis of the MDS volume issue, other than what was presented on page 287 of CMS’

How can you anticipate failure?

- PDPM = “**P**lease **D**on’t **P**ester **M**e”
- Therapy relationships not reconsidered
- Over reliance of CMS PDPM conversion calculator
- Several vendors/accounting groups providing same
- Crunching MDS data to calculate PDPM

Congress investigating alleged poor care at VA nursing homes

Share this content:
[f](#)
[t](#)
[in](#)
[s+](#)
[e](#)
[p](#)

The House of Representatives is launching an investigation into alleged poor care at Veterans Affairs nursing homes, after a newspaper exposé pulled the curtain back on the issue.

USA Today and the Boston Globe **revealed** last month that the federal government has hidden poor quality rankings at its nursing homes from the public, despite tracking that information for years. About half of the agency's homes received its lowest ranking — one star out of five — last year.

Now, after officials recently **demanding action** on the matter, the House Veterans Affairs Committee has initiated an investigation, the Globe **reported Tuesday**. A spokeswoman for Committee Chairman Phil Roe (TN-R) told the newspaper that the group hopes to hold a hearing this fall, and may release further details to the public as the investigation rolls out.

PointRight

APM: What is a Three-Day Requirement & Waiver?

Requirement:

Qualifying inpatient hospital stay of 3 consecutive days (midnights) or more (plus additional criteria)

Waiver:

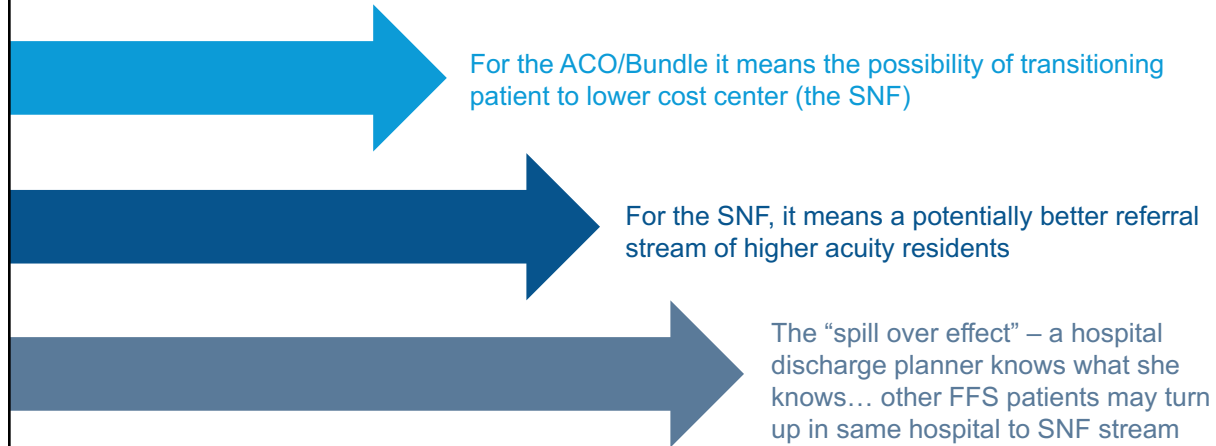

For eligible programs, CMS will waive the requirement for a 3-day inpatient hospital stay prior to a Medicare-covered, post-hospital extended care service for eligible beneficiaries

38

© PointRight 2019. All Rights Reserved.

PointRight

A Waiver is a good thing

So how do you get one?

Who Gets a Three Day Waiver?

- SNF must have a 3 or better Overall Star Rating
- ACO: Track +1, Track 3 and Next Gen – July 2019 “Pathways to Success ACO”
- Bundles: For Model 2/Model 3 participants

...but there is always a catch!

What's in the Freezer?

December 13, 2017

Five-Star is anything but frozen

Share this content: [f](#) [t](#) [in](#) [g+](#) [e](#) [p](#)

Somewhere between basking in the joy of a meaningful Thanksgiving Day celebration and contemplating the merits of an elasticized waistband for the holidays, you read the Centers for Medicare & Medicaid Services memo (Ref: S&C 18-04-NH) regarding changes to the survey process, Nursing Home Compare and Five-Star.

The day after Thanksgiving, CMS further defined its intensions with the Five-Star Quality Rating System; more specifically how the new survey process and derivative data will be used in its calculation of the Health Inspection domain.

Over the past several months, words like "frozen" and "held constant" have been used to describe the Five-Star Health Inspection domain in response to the new survey process, which began less than a month ago (Nov. 28, 2017). However, prior to this memo, we hadn't heard much about what appears to be a separate concept: a change in methodology.

Steven Littlehale

- Initial spike, then leveling off of average number of deficiencies
- Increase in G-level or greater
- More Ijs
- Increase in total health inspection score

What's In the Freezer? More Survey Points

PointRight

Five-Star Updates: Staffing Domain

- Updated Staffing rating thresholds for hours per resident per day (HPRD)
- Registered Nurse (RN) staffing HPRD given increased weight in the overall Staffing star calculation
- Lowered the threshold for number of days with reported RN staffing from seven days in the quarter to four days
 - Facilities reporting four or more days without RN 8+ hours onsite will receive a 1-star Staffing rating
 - A Staffing rating of 1 star also deducts one star from the Overall rating
- Staffing ratings no longer suppressed for facilities with 5+ days of no reported staffing

50

© PointRight 2019. All Rights Reserved.

PointRight

Five-Star Updates: Quality Measures Domain

- Two new claims-based Quality Measures (QMs) added:
 - Long-Stay Hospitalizations
 - Long-Stay Emergency Department Visits
- Long-Stay Physical Restraints QM removed
- Separate star ratings for Short-Stay and Long-Stay QMs in addition to the overall QM rating
 - Intended to allow consumers to see how facilities perform with each resident population
- Overall QM rating will still be used to calculate Overall Five-Star rating

51

© PointRight 2019. All Rights Reserved.

PointRight

Five-Star Updates: Quality Measures Domain (cont.)

- Two separate QM weightings (high and medium), with more points towards QMs with “greatest opportunity for improvement”
- Increased thresholds for QM ratings, with updates every six months
 - Increase will be 50% of the average rate of improvement for that measure

52

Identifying EoL: MDS

It's not morbid to talk about death ... a lot

Steven Littlehale

Follow @PointRight

A few weeks back, I attended my high school reunion. I found myself on the dance floor shaking a tail feather with Linda, a friend from 35 years ago who always made me laugh. Time didn't diminish her sense of humor, but our conversation took a surprising turn when she segued from a quick reminiscence to an impassioned statement about dignity at end of life.

Linda decided, at age 53, to go back to school to become a nurse. She's passionate about elder care and described the profound honor of aiding at the bedside during one's passing. Linda didn't know that in high school I made the decision to become a nurse, nor did she know that I've devoted my entire career to the betterment of our elders, especially at end of life.

Power of Prediction: Mortality

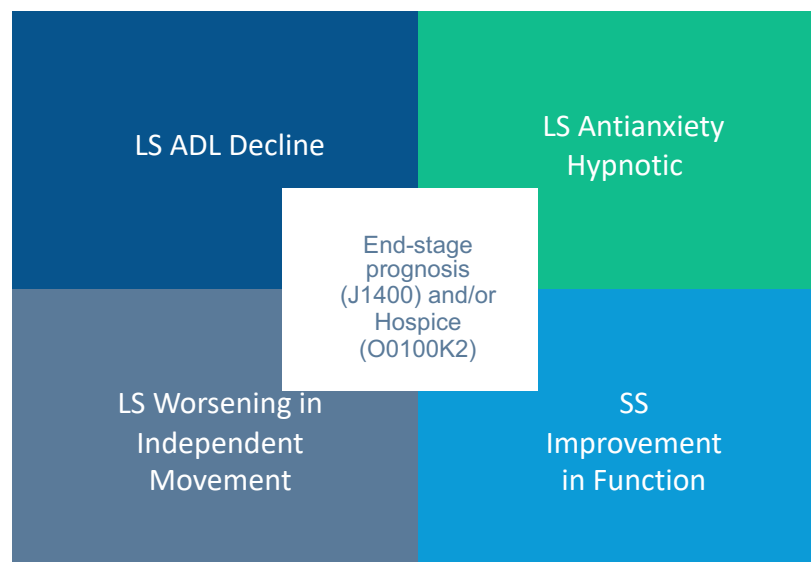

End of Life “Mortality” prediction

- Hospitalization rate of long-stay elders is 16%
- 14% of those were at end of life
- Greatest risk of litigation is “unexpected death”

J1400: Prognosis

End Stage Prognosis (J1400)

J1400. Prognosis	
Enter Code	Does the resident have a condition or chronic disease that may result in a life expectancy of less than 6 months? (Requires physician documentation)
<input type="checkbox"/>	0. No
<input type="checkbox"/>	1. Yes

Item Rationale

Health-related Quality of Life

- Residents with conditions or diseases that may result in a life expectancy of less than 6 months have special needs and may benefit from palliative or hospice services in the nursing home.

Planning for Care

- If life expectancy is less than 6 months, interdisciplinary team care planning should be based on the resident's preferences for goals and interventions of care whenever possible.

Steps for Assessment

- Review the medical record for documentation by the physician that the resident's condition or chronic disease may result in a life expectancy of less than 6 months, or that they have a terminal illness.
- If the physician states that the resident's life expectancy may be less than 6 months, request that he or she document this in the medical record. Do not code until there is documentation in the medical record.
- Review the medical record to determine whether the resident is receiving hospice services.

DEFINITION

CONDITION OR CHRONIC DISEASE THAT MAY RESULT IN A LIFE EXPECTANCY OF LESS THAN 6 MONTHS

In the physician's judgment, the resident has a diagnosis or combination of clinical conditions that have advanced (or will continue to deteriorate) to a point that the average resident with that level of illness would not be expected to survive more than 6 months.

This judgment should be substantiated by a physician note. It can be difficult to pinpoint the exact life expectancy for a single resident. Physician judgment should be based on typical or average life expectancy of residents with similar level of disease burden as this resident.

60

A program for terminally ill persons where an array of services is provided for the palliation and management of terminal illness and related conditions. The hospice must be licensed by the state as a hospice provider and/or certified under the Medicare program as a hospice provider. Under the hospice program benefit regulations, a physician is required to document in the medical record a life expectancy of less than 6 months, so if a resident is on hospice the expectation is that the documentation is in the medical record.

The Power of Predicting Mortality: A Five-Star Story

- 17 Quality Measures are used in Five-Star*
 - 12 MDS-based QMs
 - 5 claims-based QMs
- Each QM is weighted and points are assigned based on facility performance relative to the national distribution of each measure (maximum 2500 points*)
 - 5-star threshold: 1606 points*

The Power of Predicting Mortality: A Five-Star Story

- Facility A has a Five-Star Overall rating of 4 stars
 - Quality Measure domain rating: 4 stars
 - Improving the QM rating to 5 stars would add one point to the Overall rating
- How can they improve?
- Overall QM points = 1546 (60 points away from the 5-star threshold)
- QMs to focus on:
 - Short-Stay Improvement in Function
 - Long-Stay ADL Decline
 - Long-Stay Worsening Mobility
- MDS-based QMs reflect resident conditions/services provided in the facility
 - Screen for high Mortality risk and evaluate residents for end-stage condition and/or potential Hospice referral

Mortality: NLLBMVB, HAGCEA

Gender: Male Location: PR Northeast 4
 DOB: 12/20/1934 | 83 Y/O SNF Admit Date: 03/17/2018
 Marital Status: Married Level of Care: Custodial | 5 months

Source: [MDS \(5/4/2018\)](#)
[MDS History](#)

Mortality

HERE'S WHY High Risk

MDS Items that Contribute to Risk

- Extensive or total assistance for transfer (G0110B1)
- Assistance for locomotion on unit (G0110E1)
- Assistance for eating (G0110H1)
- Frequently incontinent of bowel (H0400)
- Heart failure (I0600)
- Asthma, COPD, or chronic lung disease (I6200)
- Shortness of breath when lying flat (J1100C)
- Physician documentation of life expectancy of less than six months (J1400)
- Oxygen (O0100C1, O0100C2)

Other Factors to Consider

- ☒ Hospice (O0100K2)
- ☒ Life expectancy of less than 6 months (J1400)

Power of Prediction: Mortality – the items

Mortality

HERE'S WHY
High Risk

MDS Items that Contribute to Risk

- Extensive or total assistance for transfer (G0110B1)
- Extensive or total assistance for locomotion on unit (one person assist) (G0110E1, G0110E2)
- Assistance for eating (G0110H1)
- Frequently incontinent of bowel (H0400)
- Cancer, either with or without metastasis (I0100)
- Heart failure (I0600)
- Urinary tract infection (I2300)
- Shortness of breath with exertion (J1100A)
- Shortness of breath when sitting at rest (J1100B)
- Shortness of breath when lying flat (J1100C)
- Physician documentation of life expectancy of less than six months (J1400)
- Oxygen (O0100C1, O0100C2)
- IV medications (O0100H1, O0100H2)
- Examined by the physician or authorized assistant or practitioner 1 day during target 14-day period (O0600)
- Orders changed by the physician or authorized assistant or practitioner 7 days during the target 14-day period (O0700)
